

## OPEN AIR SOUND AND LIGHT AND VISUAL SYSTEMS APPLICATIONS

The field of Public Relations and Organization Services, which is developing day by day, continues its activities in a wide range. Sound, light, video systems and protechnical applications are among the technical services that should be in almost every organization. These systems are used to support organizations and make them an unforgettable feast. Scissor platforms are especially needed in order to be able to install this entire application in an error-free, accident-free, fast and easy way. It is possible to make installations in very large areas and at different heights with a single person, quickly and without any problems. At heights from 6 meters to 16 meters, battery powered scissor lifts, which expand the working area even more with their wide and safe platform and additional opening platform, are the first choice of organizers.
